

THE MOST RECOGNISED HIGH SECURITY MASTER KEY SYSTEM IS NOW EVEN BETTER!

ENDLESS KEYHEAD COLOUR OPTIONS AND COMPATIBILITY WITH ELECTRONIC ACCESS CONTROL SYSTEMS.

The new and improved BiLock Exclusive key head has been specifically designed to incorporate extensive colour coded master keying capabilities to ensure optimal security.

One, two or three different colours can be mixed and matched from the 22 colours in any key head, with the possibility of over 8,000 colour combinations. This flexible feature in the key head enables instant identification of keys by system managers and building supervisors, and visibly defines, with ease, levels within a master key system.

Correct key identification is important and convenient. With the range of key head colours an integral component, BiLock Exclusive is ideal for use in any Master Key System.

Keyheads can also be MiFare chipped for integration into Access Control systems.
